Stream Guide

Role Overview

A SAP BTP Integration Developer designs and builds secure cloud integrations that allow SAP and non-SAP applications to exchange data automatically, reliably, and in real time. This role brings together middleware, APIs, transformation logic, monitoring, and enterprise security.

What this role does

- Connect business systems such as SAP S/4HANA, SuccessFactors, Salesforce, web applications, and internal services.
- Design, build, test, and monitor integrations so systems exchange data without manual effort.
- Transform data, secure APIs, and troubleshoot failed transactions.

What is SAP?

SAP is a global enterprise software company. Its products help organisations manage operations, transactions, supply chains, and customer processes.

- SAP S/4HANA: finance, procurement, and inventory
- SAP SuccessFactors: HR and employee management
- SAP Ariba: supplier and purchasing processes
- SAP Analytics Cloud: business intelligence and reporting

What is SAP BTP?

SAP Business Technology Platform (BTP) is SAP's cloud platform for building applications, connecting systems, working with data, and automating business processes.

Its main capability areas include integration, application development, data and analytics, and AI and automation. This learning stream focuses mainly on integration.

What is integration?

Integration makes two or more systems communicate and exchange useful information.

```
HR (employee created) -> SAP BTP integration flow -> Payroll (record updated)
```

Without integration, teams may enter the same information in multiple systems. With an integration, SAP BTP can transfer and transform the data automatically.

SAP Integration Suite

[Image: SAP Integration Suite overview]

SAP Integration Suite provides tools for connecting applications and orchestrating secure business flows.

- Cloud Integration: build integration flows
- API Management: create and secure APIs
- Event Mesh: enable event-driven communication
- Open Connectors: connect third-party applications

Integration architecture

[Image: SAP BTP Integration Architecture]

A typical integration receives data from a sender, applies routing and transformation, enforces security, and delivers the result to a target system.

What you will learn

- SAP BTP and Integration Suite
- REST APIs and application connectivity
- JSON and XML data formats
- OAuth 2.0 and integration security
- Integration flows, monitoring, and troubleshooting
- Git and CI/CD fundamentals

Integration flows (iFlows)

An integration flow describes how a message moves from a sender through processing steps to one or more receivers.

```
Sender -> API -> Transform -> Route -> Receiver
```

For example, an employee event can be received as JSON, validated, transformed to a target format, and sent to an SAP payroll system.

Typical project: employee onboarding

1. Receive an employee record from an HR API.
2. Validate required fields.
3. Transform the data to the target system format.
4. Send the record to S/4HANA.
5. Log the transaction and monitor failures.

This combines APIs, integration, security, and monitoring.

Career growth

[Image: SAP BTP role levels]

- Associate developer: learn SAP Cloud Integration, XML, JSON, and standard SAP objects.
- Integration consultant or senior lead: build complex mappings, scripts, and event-driven flows.
- Integration or solution architect: design cloud security, governance, hybrid networking, and cloud-native solutions.

Learning roadmap

SAP BTP Integration Development

Trainer: Laxmi Ahuja **Level:** Beginner **Learning modules:** 6 **Course duration:** 679 hours

Open the StudyAtLKM course (https://studyatlkm.accenture.com/enrol/index.php?id=392)

Course focus

Learn SAP BTP Integration Suite through practical topics and business use cases. The course covers APIs, integration flows, monitoring, transport, Open Connectors, API Management, and SAP Cloud Integration best practices.

Course objectives

By the end of the course, learners should be able to explain concepts and perform hands-on activities across:

- SAP BTP fundamentals
- Integration Suite and Cloud Foundry
- SAP Cloud Integration overview and pre-packaged content
- Connectivity options and security
- Monitoring and transport
- API Management overview, development, and policies
- Open Connectors instances
- Common resources and formulas
- SAP PI/PO
- Best practices for SAP Cloud Integration and API Management

Continuous assessment

Open the Continuous Assessment on Mettl (https://digitallearning.accenture.com/atci/learn-home/learn/learn-landing?LearningPlan=User%20Group&Name=SAP%20BTP%20Integration%20Development&type=org)

Use the assessment to check your proficiency and identify topics to revisit. The course information states that each assessment has a maximum of one attempt, so review the current assessment instructions before starting.

Day 1: SAP & BTP Fundamentals

Introduction to SAP, ERP, and SAP S/4HANA.

Contents

- What is SAP?
- What is ERP?
- SAP S/4HANA overview

Day 1 · SAP Overview

Date: 28 September 2026

1. What is SAP?

SAP is a global company that develops software to help organisations run, manage, and improve their businesses.

Overview of SAP: ERP, business software, AI, and solutions

SAP is best known for enterprise resource planning (ERP) software, cloud business applications, and AI-powered business solutions that help organisations make better decisions, automate work, and adapt to changing business conditions.

SAP solutions connect core business processes such as finance, procurement, supply chain management, manufacturing, human resources, customer experience, and analytics in a single integrated environment.

[Image: Image 1: SAP at a glance]

What does SAP stand for?

SAP stands for **Systems, Applications and Products in Data Processing**. The original meaning comes from the company's German name when it was founded, Systemanalyse Programmentwicklung, which translates to “Systems Analysis Program Development.”

What does SAP do, and why do companies use it?

SAP helps organisations manage and optimise the processes that keep businesses running. Most companies generate information across many departments, systems, and teams. Finance has its own data; procurement has another set of information; HR, manufacturing, customer service, and operations often rely on different tools and workflows.

SAP helps bring those processes and data together. Instead of relying on disconnected systems, spreadsheets, or manual processes, organisations can use SAP solutions to operate with greater visibility, consistency, and efficiency.

What SAP helps businesses manage

[Image: Image 2: What SAP helps businesses manage]

Why organisations choose SAP

Organisations often choose SAP for five key reasons, including integrated processes, consistent information, visibility across operations, automation, and support for better decision-making.

[Image: Image 3: Five key reasons organisations choose SAP]

What are the main SAP product categories and solutions?

SAP provides products across ERP, business technology, human resources, procurement, customer experience, analytics, and other business areas.

[Image: Image 4: Main SAP product categories]

SAP solutions combine products and capabilities to address business needs across connected processes.

[Image: Image 5: SAP solutions]

Which industries use SAP?

SAP software supports industry-specific needs across a wide range of sectors. Industry capabilities help organisations address unique operational, regulatory, and market requirements while maintaining integrated business processes.

Common industries that use SAP include manufacturing, retail, utilities, financial services, healthcare, and the public sector.

[Image: Image 6: Industries that use SAP]

What is the difference between SAP and ERP?

ERP is a category of software used to manage connected business processes. SAP is a company that develops ERP products and many other business solutions. SAP is both the company and the name commonly used for its software.

[Image: Image 7: What is ERP and how does SAP fit]

How is SAP incorporating AI?

SAP embeds AI into business processes through SAP Business AI and Joule to help users automate work, gain insights, and improve productivity.

[Image: Image 8: How SAP incorporates AI]

Frequently asked questions

Is SAP a company or software? SAP is both. SAP is the company, and SAP software refers to the business applications the company develops and sells.

Why do companies use SAP? Companies use SAP to integrate business processes, improve visibility, standardise operations, automate work, and support better decision-making.

What are SAP's main products? SAP's main products include SAP S/4HANA, SAP Business Technology Platform, SAP SuccessFactors, SAP Ariba, SAP Concur, and SAP Customer Experience.

How can I try SAP products? Some SAP products have free trials. Explore the relevant SAP product page to find available trials and choose an option that fits your needs.

What is SAP S/4HANA? SAP S/4HANA is SAP's flagship ERP solution for managing core business operations.

How does SAP help with AI? SAP embeds AI into business processes through SAP Business AI and Joule to help users automate work, gain insights, and improve productivity.

Is SAP only for large enterprises? No. SAP offers solutions for small, midsize, growing, and large organisations, including SAP Business One and SAP GROW.

2. What is ERP?

SAP ERP is a comprehensive software system that streamlines processes, improves productivity, and provides real-time insights across an organisation.

SAP ERP made its first appearance in 1972, when five former IBM engineers in Germany saw the potential to integrate business operations in software. Their idea was to create a system that could bring a company's operations together in one cohesive software package. This vision led to SAP R/2, an early mainframe-based ERP system.

As technology advanced, SAP R/3 brought ERP to the client-server environment in the 1990s. SAP later introduced SAP S/4HANA, an ERP suite using in-memory computing for faster processing and real-time analytics. SAP S/4HANA Cloud extended this vision with cloud ERP options.

[Image: Image 9: SAP ERP today and its evolution]

SAP S/4HANA public and private cloud

[Image: Image 10: SAP S/4HANA public and private cloud]

Benefits of the SAP ERP system

An ERP system can connect business data, reduce duplicate entry, standardise workflows, improve reporting, and give teams a more current view of operations.

[Image: Image 11: Benefits of the SAP ERP system]

3. SAP S/4HANA overview

SAP releases, versions, and EWM

SAP products have release and version details that help identify available capabilities and maintenance updates. Check the current SAP documentation for the version used in your learning environment.

[Image: Image 12: SAP Release]

[Image: Image 13a: SAP Versions]

[Image: Image 13b: SAP Versions]

SAP Extended Warehouse Management (SAP EWM) supports warehouse operations and logistics processes.

[Image: Image 14: SAP EWM]

How SAP S/4HANA works

SAP S/4HANA combines business applications with the SAP HANA database. In-memory processing and massively parallel processing support high-speed operations and analytics. OLTP refers to online transaction processing; analytical workloads support reporting and analysis.

[Image: Image 15: Introduction to SAP S/4HANA]

[Image: Image 16: Database processing]

[Image: Image 17: Massively parallel processing]

[Image: Image 18: Convergence of OLTP and analytics]

Editions and releases of SAP S/4HANA

SAP S/4HANA editions and releases can differ in deployment model, update cycle, and available capabilities. Use the relevant product documentation when comparing versions.

[Image: Image 19: Editions of SAP S/4HANA]

[Image: Image 20: Releases of SAP S/4HANA]

Complete business suite and SAP Fiori

SAP S/4HANA supports integrated processes across a business suite. SAP Fiori provides a role-based user experience for accessing business tasks across devices.

[Image: Image 21a: Complete business suite]

[Image: Image 21b: Complete business suite]

[Image: Image 22: Significance of SAP Fiori]

Deployment options and cloud service packages

Deployment choices include on-premise, private cloud, and public cloud. Cloud service packages and available capabilities depend on the selected offering; check current SAP documentation for implementation decisions.

[Image: Image 23a: Deployment options]

[Image: Image 23b: Deployment options]

[Image: Image 23c: Deployment options]

[Image: Image 24a: Cloud service packages]

[Image: Image 24b: Cloud service packages]

[Image: Image 24c: Cloud service packages]

[Image: Image 24d: Cloud service packages]

Key differences, value proposition, and implementation

SAP Activate is SAP's implementation methodology, combining guided configuration, best practices, and iterative delivery.

[Image: Image 25: Key differences in SAP S/4HANA]

[Image: Image 26: SAP S/4HANA Cloud value proposition]

[Image: Image 27: SAP S/4HANA 1909]

[Image: Image 28: SAP Activate implementation methodology]

Day 2

Source: day-wise/day-2/content.md

Day 2: SAP Discovery and Developer Resources

Date: 29 September 2026

SAP Discovery Center

Open SAP Discovery Center (https://discovery-center.cloud.sap/index.html)

SAP Discovery Center is a self-service portal for exploring SAP BTP services, missions, and use cases. Its guided missions help teams evaluate services and plan implementations.

[Image: Image 1: SAP Discovery Center]

[Image: Image 2: Discovery Center and cloud portal comparison]

SAP Business Accelerator Hub

Open SAP Business Accelerator Hub (https://api.sap.com)

SAP Business Accelerator Hub is a developer portal for discovering SAP APIs, integration content, and related documentation. Check each API's current documentation for authentication, endpoints, request formats, and rate limits.

[Image: Image 3: SAP Business Accelerator Hub]

Example OAuth 2.0 authorization-code flow

1. The client app sends the user to the authorization URL with a client ID, scope, and redirect URI.
2. The user signs in and approves access.
3. The authorization server redirects to the client app with an authorization code.
4. The client app exchanges the code at the token endpoint.
5. The client app uses the access token to make authorized API calls.

For an API-specific example, see the Alpha API documentation (https://alphaapi.sasonline.in/api-docs/).

Day 3

Source: day-wise/day-3/content.md

Day 3: SAP Learning and Support Resources

Date: 30 September 2026

SAP Learning

Open SAP Learning (https://learning.sap.com)

SAP Learning provides learning journeys, self-paced courses, and certification preparation. Availability of premium learning and hands-on practice depends on the current SAP Learning offering.

[Image: Image 1: SAP Learning portal]

[Image: Image 2: Free and premium SAP Learning]

SAP Help Portal

Open SAP Help Portal (https://help.sap.com/docs)

SAP Help Portal is SAP's documentation source for product guides, API references, and technical instructions. Use documentation for the product and version in your environment.

[Image: Image 3: SAP Help Portal]

Why it matters

- Learn Integration Suite integration-flow patterns.
- Understand API Management policies.
- Follow official troubleshooting steps.
- Prepare for certifications and project work using product documentation.

SAP Community

Open SAP Community (https://community.sap.com)

SAP Community is a place for SAP professionals, developers, and learners to ask questions, share knowledge, join groups, and discuss SAP products.

[Image: Image 4: SAP Community]

Day 4

Source: day-wise/day-4/content.md

Day 4: Message Protocols

Date: 1 October 2026

Message protocols define how applications exchange requests, responses, or business messages. The protocols below are common in SAP integration landscapes; the choice depends on the systems, data model, and interaction pattern.

RFC Processing with the RFC Adapter

SAP Help: RFC Processing with the RFC Adapter (https://help.sap.com/doc/saphelpsnc700ehp01/7.0.1/en-US/25/76cd3bae738826e10000000a11402f/content.htm?no_cache=true)

Remote Function Call (RFC) lets an SAP system call a function module in another system. In an integration scenario, an RFC adapter can connect an integration flow to SAP RFC-enabled functions. Connectivity, destinations, and authorizations must be configured for the target landscape.

[Image: Image 1a: RFC adapter processing overview]

[Image: Image 1b: RFC adapter configuration]

[Image: Image 1c: RFC message processing]

SOAP Framework

SAP Help: SOAP Framework and Web Services for ABAP (https://help.sap.com/doc/saphelpsnc700ehp01/7.0.1/en-US/bb/ddb33d2ae46b3be10000000a114084/content.htm?no_cache=true)

SOAP is a message protocol commonly used with XML-based web services. A service contract, often described with WSDL, defines the operations and message structure. SOAP services may use different bindings and security settings, so follow the service's contract and configuration.

[Image: Image 2: SOAP Framework and Web Services for ABAP]

SAP Gateway and OData

SAP Help: SAP Gateway and OData (https://help.sap.com/doc/saphelpnw74/7.4.16/en-us/ec/aeea50ca692309e10000000a445394/content.htm?nocache=true)

OData is a web protocol for exposing and consuming data through resource-oriented services. Clients address entities and collections using URLs and standard HTTP methods. SAP Gateway can expose SAP data and operations as OData services for web and mobile clients.

[Image: Image 3: Callable entity]

[Image: Image 4: OData across multiple devices and platforms]

IDoc

SAP Help: IDoc Processing (https://help.sap.com/saphelpem700ehp01/helpdata/en/79/d0b51753406d4d86470debdf027c68/content.htm?no_cache=true)

An Intermediate Document (IDoc) is a structured SAP message format used to exchange business documents between systems. IDocs are commonly processed asynchronously and include a control record and data records organised into segments. Processing status helps track the document through the receiving system.

[Image: Image 5: SAP IDoc processing]

AMQP

SAP Help: AMQP Client Architecture (https://help.sap.com/docs/ABAPPLATFORMNEW/05d041d3df1a4595a3c45f57c15e2325/34b187b3d3f04b6fa1c0f0fad15bc064.html?version=202310.003&locale=en-US)

Advanced Message Queuing Protocol (AMQP) is an open messaging protocol for exchanging messages through messaging infrastructure. Producers send messages and consumers receive them through configured destinations such as queues or topics. This decouples the sender and receiver in time and allows each side to process messages independently.

[Image: Image 6: SAP AMQP client architecture]

Day 5

Source: day-wise/day-5/content.md

Day 5: Introduction to SAP Business Technology Platform

Module: Module 2

Date: 5 October 2026

This module introduces SAP Business Technology Platform (SAP BTP), the Cloud Foundry environment, and the steps for creating a trial account and enabling SAP Integration Suite.

Unit 1: Introduction to SAP Business Technology Platform

What Is SAP Business Technology Platform?

[Image: Image 1: SAP Business Technology Platform]

[Image: Image 2: Introduction to SAP BTP]

[Image: Image 3: SAP BTP benefits]

[Image: Image 4: SAP BTP architecture]

Landscape Architecture

[Image: Image 5: Cloud computing]

[Image: Image 6: Cloud service models overview]

Cloud Service Models: PaaS

[Image: Image 7: Platform as a Service (PaaS)]

Unit 3: Creating an SAP BTP Trial Account

[Image: Image 26: Creating an SAP BTP trial account]

SAP BTP Landing Page

[Image: Image 27: SAP BTP landing page]

SAP BTP Integration Developer: Step-by-Step Setup Guide

Phase 1: Sign Up and Create a Subaccount

1. **Open the portal:** Go to the SAP BTP Trial Registration Page (https://account.hana.ondemand.com/#/home/welcome) and select **Register** or **Sign Up**.
2. **Verify your email:** Complete the registration form. Open the verification email and follow its activation link.
3. **Log in:** Open the SAP BTP Cockpit (https://ondemand.com) and sign in with your new credentials.
4. **Initialize your trial:** Select **Enter Your Trial Account**. The platform initializes a global account and default trial subaccount; wait for setup to finish.

Phase 2: Create the Integration Suite Instance

1. **Open your subaccount:** Select the **trial** tile to open its dashboard.
2. **Open the marketplace:** From the left navigation, select **Services** > **Service Marketplace**.
3. **Find Integration Suite:** Search for **Integration Suite**.
4. **Create the subscription:** Open the Integration Suite card's menu, select **Create**, keep the default `trial` plan, and select **Create** again.

If Integration Suite is unavailable, check **Entitlements** and add it to the subaccount's allocations if your trial account offers it.

Phase 3: Assign Security Roles

Assign the required permissions before opening the Integration Suite dashboard.

1. From the cockpit navigation, select **Security** > **Users**.
2. Select your username or email address.
3. Select **Assign Role Collection**, find and select `Integration_Provisioner`, then confirm the assignment.
4. If available and needed, also assign `PI_Administrator` or `PI_Integration_Developer`.

Phase 4: Launch Integration Suite

1. From the navigation, select **Services** > **Instances and Subscriptions**.
2. Find **Integration Suite** under **Subscriptions** and select **Go to Application**.
3. On first launch, select **Add Capabilities** or **Manage Capabilities**, choose **Build Integration Scenarios (Cloud Integration)**, and select **Activate**.
4. Wait for activation to complete. It can take 10–15 minutes. Refresh the page afterward to check for the **Design** and **Monitor** capabilities.

Trial availability, cockpit labels, role collections, and activation options can vary by account and SAP's current offering. Follow the options shown in your tenant and consult the SAP Help Portal if a step is unavailable.

Day 7

Unit 2: Creating First Integration Flow

- Practice and learning activity: Creating First Integration Flow (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24683&forceview=1)

Unit 3: XSLT Mapping

- XSLT Mapping and its need: SAP Help - XSLT Mapping (https://help.sap.com/saphelpem900/helpdata/en/4b/f40f2fc0c33de4e10000000a42189e/content.htm?nocache=true)
- Watch video: XSLT Mapping Demo (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24684)

Unit 4: Sequential and Parallel Multicast

- Reference: Sequential and Parallel Multicast (https://www.youtube.com/watch?v=ER414LzuWKk)

Unit 5.1: Encryption and Decryption in SAP Cloud Integration - Part 1

- Watch video: Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24686)

Unit 5.2: Encryption and Decryption in SAP Cloud Integration - Part 2

- Watch video: Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24687)

Unit 6: Message Header and Exchange Property

- Content Modifier Overview: Define Content Modifier (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/define-content-modifier)
- Watch video: Message Header and Exchange Property (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24688)

Unit 7: Local Integration Process Call

- Reference: Local Integration Process Call (https://community.sap.com/t5/technology-blog-posts-by-members/sap-cp-is-sap-hci-looping-process-call-in-detail/ba-p/13349526)

Unit 8: Simulation in Integration Flow

- Watch video: Simulation in Integration Flow (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24690&forceview=1)

Unit 9: Splitters

- Reference: SAP Cloud Platform Integration - General Splitter (https://blogs.sap.com/2020/09/21/sap-cloud-platform-integration-general-splitter/)

Unit 10: Groovy Scripts Basics

- Groovy Script Overview: Oracle Groovy Documentation (https://docs.oracle.com/middleware/1213/odi/develop/groovy.htm)
- Watch video: Groovy Script Basics (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24692&forceview=1)

Unit 11: Groovy Scripts in Integration Flow

- Watch video: Groovy Scripts in Integration Flow (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24693&forceview=1)

Unit 12: Creating a REST API under SAP Cloud Integration

- Watch video: REST API in SAP Cloud Integration (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24694&forceview=1)

[Image: Image 22: API First is the recommended approach]

Day 12

Source: day-wise/day-12/content.md

Day 12: SAP Cloud Integration Connectivity Options

Module: Module 8

Unit 1: SAP Cloud Integration Connectivity Options

[Image: Image 1: SAP Cloud Integration connectivity Options]

[Image: Image 2: SAP CI Connectivity Options Agenda]

[Image: Image 3: Connectivity Options]

[Image: Image 4: SOAP Adapter 1]

[Image: Image 5: SOAP Adapter 2]

[Image: Image 6: SOAP Adapter 3]

[Image: Image 7: SOAP Adapter 4]

[Image: Image 8: SOAP Adapter 5]

[Image: Image 9: SOAP Adapter 6]

[Image: Image 10: SOAP Adapter 7]

[Image: Image 11: SFTP Adapter 1]

[Image: Image 12: SFTP Adapter 2]

[Image: Image 13: SFTP Adapter 3]

[Image: Image 14: SFTP Adapter 4]

[Image: Image 15: IDOC Adapter 1]

[Image: Image 16: IDOC Adapter 2]

[Image: Image 17: HTTPS Adapter]

[Image: Image 18: HTTP Adapter]

[Image: Image 19: SuccessFactors Adapter 1]

[Image: Image 20: SuccessFactors Adapter 2]

[Image: Image 21: SuccessFactors Adapter 3]

[Image: Image 22: SuccessFactors Adapter 4]

[Image: Image 23: SuccessFactors Adapter 5]

[Image: Image 24: SuccessFactors Adapter 6]

[Image: Image 25: SuccessFactors Adapter 7]

[Image: Image 26: SuccessFactors Adapter 8]

[Image: Image 27: SuccessFactors Adapter 9]

[Image: Image 28: SuccessFactors Adapter 10]

[Image: Image 29: SuccessFactors Adapter 11]

[Image: Image 30: SuccessFactors Adapter 12]

[Image: Image 31: SuccessFactors Adapter 13]

[Image: Image 32: SuccessFactors Adapter 14]

[Image: Image 33: OData Adapter]

[Image: Image 34: Ariba Adapter]

[Image: Image 35: Facebook Adapter]

[Image: Image 36: JMS Adapter]

[Image: Image 37: LDAP Adapter 1]

[Image: Image 38: LDAP Adapter 2]

[Image: Image 39: ODC Adapter]

[Image: Image 40: RFC Adapter]

Unit 2.1: SOAP Sender & Receiver Adapter - Part 1

- Watch video: SOAP Sender & Receiver Adapter Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24696)

Unit 2.2: SOAP Sender & Receiver Adapter - Part 2

- Watch video: SOAP Sender & Receiver Adapter Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24697&forceview=1)

Unit 3: OData Adapter - Internet

- Watch video: OData Adapter - Internet (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24698)

Unit 4.1: OData OnPremise - Part 1

- OData Adapter documentation: OData Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/odata-adapter)
- Watch video: OData OnPremise Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24699)

Unit 4.2: OData OnPremise - Part 2

- OData Adapter documentation: OData Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/odata-adapter)
- Watch video: OData OnPremise Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24700)

Unit 5.1: Mail Adapter - Part 1

- Mail Adapter documentation: Mail Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/mail-adapter)
- Watch video: Mail Adapter Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24701)

Unit 5.2: Mail Adapter - Part 2

- Mail Adapter documentation: Mail Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/mail-adapter)
- Watch video: Mail Adapter Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24702)

Unit 6.1: SFTP & FTP Adapters - Part 1

- SFTP Adapter documentation: SFTP Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/sftp-adapter)
- FTP Adapter documentation: FTP Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/ftp-adapter)
- Watch video: SFTP & FTP Adapters Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24703)

Unit 6.2: SFTP & FTP Adapters - Part 2

- Watch video: SFTP & FTP Adapters Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24704)

Unit 7.1: Create Record in SAP SuccessFactors - Part 1

- Watch video: Create Record in SAP SuccessFactors Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24705)

Unit 7.2: Create Record in SAP SuccessFactors - Part 2

- Watch video: Create Record in SAP SuccessFactors Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24706)

Unit 8: Read Record from SAP SuccessFactors

- Watch video: Read Record from SAP SuccessFactors (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24707)

Unit 9: AMQP Sender Adapter

- AMQP Adapter documentation: AMQP Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/amqp-adapter)
- Watch video: AMQP Sender Adapter (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24708)

Unit 10.1: AMQP Receiver Adapter - Part 1

- AMQP Adapter documentation: AMQP Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/amqp-adapter)
- Watch video: AMQP Receiver Adapter Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24709)

Unit 10.2: AMQP Receiver Adapter - Part 2

- AMQP Adapter documentation: AMQP Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/amqp-adapter)
- Watch video: AMQP Receiver Adapter Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24710)

Unit 11: SAP Open Connectors

- SAP Open Connector Receiver Adapter: Documentation (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/openconnectors-receiver-adapter)
- Watch video: SAP Open Connectors (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24711)

Unit 12: RFC Adapter

- RFC Receiver Adapter: Documentation (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/rfc-receiver-adapter)
- Creating RFC Destination: Documentation (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/creating-rfc-destination)
- Watch video: RFC Adapter (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24712)

Unit 13: IDoc Adapter

- Resource: IDoc Adapter Overview (https://blogs.sap.com/2020/07/15/sap-s4h-idoc-to-sap-cpi-inbound-idoc-interface/)

Unit 14: JMS Adapter

- Hands-on tutorial: JMS Adapter (https://studyatlkm.accenture.com/mod/securepdf/view.php?id=24714)

Unit 15: ProcessDirect Adapter

- ProcessDirect Adapter documentation: ProcessDirect Adapter (https://help.sap.com/docs/cloud-integration/sap-cloud-integration/processdirect-adapter)
- Setup reference: Using ProcessDirect Adapter Setup (https://community.sap.com/t5/technology-blog-posts-by-sap/processdirect-adapter/ba-p/13351290)
- Hands-on tutorial: ProcessDirect Hands-on (https://studyatlkm.accenture.com/mod/securepdf/view.php?id=24715)

Unit 16: Twitter Adapter

- Resource: Twitter Receiver Adapter (https://sapintegrationhub.blogspot.com/2019/05/twitter-receiver-adapter-in-scpi.html)

Day 13

Source: day-wise/day-13/content.md

Day 13: SAP Cloud Integration Security Aspects

Module: Module 9

Unit 1: Security Material Overview

- Watch video: Security Material Overview (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24717)

Unit 2.1: Security Material Demonstration - Part 1

- Watch video: Security Material Demonstration Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24718)

Unit 2.2: Security Material Demonstration - Part 2

- Watch video: Security Material Demonstration Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24719)

Unit 3: Keystore

- Watch video: Keystore (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24720)

Unit 4: Connectivity Test

- Watch video: Connectivity Test (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24721)

Security focus areas

- Securing communication between sender and receiver systems
- Managing certificates and keystore entries
- Testing connectivity and validating trust relationships
- Applying secure integration design practices in SAP Cloud Integration

Day 14

Source: day-wise/day-14/content.md

Day 14: SAP Cloud Integration Monitoring and Transport Options

Module: Module 10

Unit 1: SAP Cloud Integration Monitoring and Transport Options

[Image: Image 1: SAP Cloud Integration Monitoring and Transport]

[Image: Image 2: Agenda]

[Image: Image 3: Monitoring using Web UI 1]

[Image: Image 4: Monitoring using Web UI 2]

[Image: Image 5: Monitoring using Web UI 3]

[Image: Image 6: Monitoring using Web UI 4]

[Image: Image 7: Monitoring - Troubleshooting Tricks 1]

[Image: Image 8: Monitoring - Troubleshooting Tricks 2]

[Image: Image 9: APIs provided by Cloud Integration]

[Image: Image 10: OData API]

[Image: Image 11: Content Transport Options 1]

[Image: Image 12: Content Transport Options 2]

Unit 2: Log Level Configuration

- Log Level blog: Setting MPL Log Level at Message Level (https://community.sap.com/t5/technology-blog-posts-by-members/setting-an-mpl-log-level-at-a-message-level-in-sap-cpi/ba-p/13485995)
- Watch video: Log Level Configuration (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24723)

Unit 3: Activating Cloud Transport Management and its Configuration (Optional)

- Watch video: Cloud Transport Management (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24724)

Unit 4.1: Transporting Package using Transport Management Service - Part 1

- Watch video: Transporting Package Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24725)

Unit 4.2: Transporting Package using Transport Management Service - Part 2

- Watch video: Transporting Package Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24726)

Unit 4.3: Transporting Package using Transport Management Service - Part 3

- Watch video: Transporting Package Part 3 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24727)

Day 15

Source: day-wise/day-15/content.md

Day 15: SAP API Management Overview

Module: Module 11

Unit 1: SAP API Management

[Image: Image 1: SAP API Management]

[Image: Image 2: Application Programming Interfaces 1]

[Image: Image 3: Application Programming Interfaces 2]

[Image: Image 4: Application Programming Interfaces 3]

[Image: Image 5: Application Programming Interfaces 4]

[Image: Image 6: Application Programming Interfaces 5]

[Image: Image 7: Application Programming Interfaces 6]

[Image: Image 8: Application Programming Interfaces 7]

Unit 2: Understanding API Portal

- Watch video: Understanding API Portal (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24730)

Unit 3.1: API Pre-Packaged Content - Part 1

- Watch video: API Pre-Packaged Content Part 1 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24731)

Unit 3.2: API Pre-Packaged Content - Part 2

- Watch video: API Pre-Packaged Content Part 2 (https://studyatlkm.accenture.com/mod/h5pactivity/view.php?id=24732)

API management concepts covered

- API lifecycle and portal concepts
- API exposure and consumption patterns
- Security and policy enforcement
- API documentation and pre-packaged content

Scenario Examples

Source: day-wise/scenario-examples/content.md

Scenario-Based Examples: SAP BTP Integration Development

Follow a business scenario from disconnected systems to coordinated processes. These examples show how SAP BTP Integration Suite can connect applications, transform data, and help information reach the right systems at the right time.

[Image: Image 1: Imagine a business integration challenge]

[Image: Image 2: Universal translator between business applications]

[Image: Image 3: Cloud Platform Integration]

[Image: Image 4: Real-time business scenario]

[Image: Image 5: Steps for building an integration scenario]

[Image: Image 6: Coca-Cola case study]

[Image: Image 7: Industry-wide impact of business integration]

Source coverage

Included course guides, lesson Markdown files available for Days 1–15, and scenario examples. Day 6 has no standalone lesson Markdown file in the repository, so it is not represented as a full lesson here. Image contents are not OCRed; captions and alt text from the Markdown are included.
